Industrial automation Autodesk Industrial Design Suite, based on AutoCAD, began as a suite of tools used by mechanical and aerospace design engineers. It now incorporates a wider range of software design and analysis tools designed to meet the needs of mechanical and aerospace engineers, as well as general engineers and architectural and urban planners. It has several different modules. In 2012, Autodesk also introduced a new suite of software, Autodesk Simulation Suite, that can be used for the simulation and validation of systems in the field of automotive, aerospace, and energy. In 2016, Autodesk acquired CAE Design LLC, the vendor of the EESC software, which is used for computer-aided engineering (CAE) and computer-aided design (CAD) programs. In 2017, Autodesk released the Autodesk Simulation Suite which includes CAE, CAE applications and solver

tools in a single software application to help designers and engineers create accurate and efficient simulations of their designs. The Autodesk Simulation Suite helps design teams create more accurate designs and enables engineers to run faster, better, and cheaper. The Autodesk Simulation Suite includes CAE simulation tools such as: CAE Design Suite Autodesk Simulation Suite (CAE) Autodesk Simulation Designer (CADD) Autodesk Simulation Builder (CADD) Autodesk Simulation Optimization (CAE) Autodesk Simulation Workspace (CAE) Autodesk Simulation Deployer (CAE) Autodesk Simulation Toolkit (CAE) Autodesk Simulation Environment (CAE) Autodesk Simulation Executor (CAE) Autodesk Simulation System Manager (CAE) Autodesk Simulation Analytics (CAE) Autodesk Simulation Infrastructure (CAE) Autodesk Simulation Template Manager (CAE) Autodesk Simulation Content Management System (CAE) Autodesk Simulation Web Portal (CAE) Autodesk Simulation Workspace (CAE) Autodesk Simulation User Interface (CAE) Autodesk Simulation User Experience (CAE) Autodesk Simulation API (CAE) Autodesk Simulation Pipeline (CAE) Autodesk
